Summary

Senior Python Backend Engineer with 6+ years of experience architecting scalable, production-ready APIs and AI-assisted workflows. Expert in microservices, async processing, and cloud-native deployments across AWS and GCP. Proven track record owning features end-to-end—from design to rollout—using tools like Claude Code and Cursor to accelerate delivery without compromising quality.

Skills

Backend: Python, Django (DRF), Celery, RabbitMQ, Redis, REST, GraphQL, OAuth/OAuth2, Unicorn

Frontend: TypeScript, React

Databases: PostgreSQL, MySQL, MongoDB, Elasticsearch, SQL & NoSQL design

Cloud/DevOps: Docker, Kubernetes, NGINX, AWS, GCP, Linux, Git, GitLab CI, IaC (Terraform, Ansible)

Quality/Observability: Pytest, Cypress, Sentry, Grafana, OpenAPI/Swagger

AI Delivery: Claude Code, Cursor, AI-assisted product refinement, implementation, code review, QA

Practices: Microservices, API design & standardization, performance tuning, CI/CD pipelines

Experience

Senior Software Engineer – Shopify Apps

Dec 2024 – Present

Partnerz – Remote (UAE)

- Spearheaded end-to-end development of Subscription Box features, adding \$5,000+ to MRR.
- Optimized CI/CD pipelines to reduce Pytest runtime by 25%, saving the engineering team 8 hours monthly.
- Took ownership of merge request reviews, saving Engineering Management 16 hours per month.
- Developed targeted pricing and onboarding flows, driving a 10% increase in conversion rates in one month.
- Built theme-adaptive UI widgets, successfully decreasing support tickets by 45%.
- Established Claude Code and Cursor as a primary development workflow spanning product refinement, implementation, tests, and QA.
- Designed AI-assisted coding standards and agentic skills that tripled feature delivery speed while preserving review quality.
- **Stack:** Python, Django, TypeScript, React, PostgreSQL, Redis, RabbitMQ, Pub/Sub, Celery, REST, GraphQL, Docker, Kubernetes, GCP, GitLab CI, Pytest, Cypress, Sentry, Grafana, OAuth2, Shopify APIs.

Technical Team Lead

Apr 2023 – Nov 2024

Payvand Business Network Inc. – Remote (Canada)

- Managed an 8-engineer team building property valuation platforms, taking ownership of the microservices architecture.
- Integrated OAuth2 with major partners, processing 30+ requests/minute with sub-3-second p95 latency.
- Introduced containerized CI/CD and IaC, slashing deployment times by nearly 50% and enabling daily releases.
- Acted as primary backend code reviewer (5+ MRs/week), enforcing strict standards to maintain high quality.
- Developed innovative features for the LegalKite RegTech platform, boosting user conversion by 25%.
- Engineered LLM prompts for a legal exam evaluator, delivering high-precision automated grading in seconds.
- Optimized Elasticsearch indices and test infrastructure, halving p95 search latency.
- Revamped SEO indexing logic, increasing indexed web pages tenfold.
- Standardized API documentation using OpenAPI/Swagger, boosting cross-functional team velocity by 30%.
- **Stack:** Python, Django, Celery, PostgreSQL, Redis, RabbitMQ, Elasticsearch, Microservices, Unicorn, Docker, NGINX, GitLab CI, OpenAPI, Sentry, Grafana, Linux.

Senior Software Engineer

Sep 2021 – Mar 2023

Sangyab – Isfahan, Iran (Hybrid/Remote)

- Engineered a visual search engine across 1M+ images using embeddings, achieving sub-2-second p95 latency.
- Implemented Redis distributed locks to manage high-concurrency requests and ensure data consistency.
- Deployed staging and production CI/CD pipelines, accelerating the development lifecycle by 40%.
- Enhanced technical SEO and page indexing, driving a 150% increase in Google impressions in two weeks.
- **Stack:** Python, Django, PostgreSQL, Redis, Selenium, Unicorn, Docker, NGINX, GitHub Actions, Linux.

Software Engineer

Mar 2020 – Aug 2021

Novin Pardazan Arax – Isfahan, Iran

- Architected a daily settlement system for a custom banking application handling 1,000+ daily transactions.
- Automated integration and deployment workflows, cutting the SDLC timeframe by 30%.
- Introduced comprehensive regression testing, reducing production defects by 25%.
- **Stack:** PHP, Python, Django, MySQL, PostgreSQL, Docker, NGINX, WordPress, Linux, GitHub Actions.

Education

M.Sc., Computer Engineering (Software) – Sharif University of Technology

Feb 2025

GPA: 4.0/4.0. Thesis: *Pipeline Inference Optimization* – reduced compute costs by 25% via GPU partitioning experiments and a runtime scheduler for automated configuration. Tools: Kubernetes, Docker, Ansible.

B.Sc., Computer Engineering (Software) – University of Isfahan

2017–2021

Ranked 1st in faculty – GPA 3.98/4.0 (18.86/20).

Open Source & Volunteering

- Contributed bug fixes and feature enhancements to open-source Python projects (django-imagekit, milvus-io/bootcamp).
- Managed infrastructure delivery and web development for the 2021 ISC Conference (Django, React, MongoDB).
- Developed early web systems, including a comprehensive graduation workflow portal for master's students (WordPress, PHP).
